

POLYCOTE

Where corporate image and bespoke resin
blurs the boundaries of beauty and functionality

unmistakably

POLYCOTE

By commissioning Polycote, the pleasure begins before you ever own one of our products. Having chosen a finish and colour to your own specific corporate requirements we will send the same application team, with the same quality of product to each of your sites nationwide.

Ever since we laid our first floor back in 1991, we have challenged the impossible and we have proved beyond doubt that our floors can withstand some of the heaviest traffic and the harshest treatment Polycote products are now specified worldwide and in accordance with our goals, we have continued to break new ground with highly specialised products capable of providing long term protection of your property.

No matter whether it is an oil contaminated surface, the prevention of rising damp or the protection from chemical attack, our chemists have blurred the boundaries of beauty, strength and functionality.

With the installation of a bright clean workplace that welcomes both the employee and the customer alike, you will achieve a sense of space and calm, experience a completely new vibrancy within the area and...

'Raise your corporate image to an entirely new level'.

uniquely

CORPORATE

The aim of corporate branding has long been focussed on the customer's perspective. However, we would like to introduce a new corporate branding to every one of your sites nationwide, that will contribute massively to organisation and inevitability, profitability.

The improvement in the performance of employees has been well proven, as clearly defined areas showing pedestrian walkways, where to show extra vigilance or store certain items brings about a huge reduction of stress.

Consistent floor finishes empower the employee to maintain the same level of safety and cleanliness which in turn, provides a huge boost to both their confidence and achievement. As each site endorses the new corporate policy, Health and Safety will take on an entirely new dimension.

Many of our customers are now colour coding areas such as Goods In or Despatch. By doing so, they have clearly reduced mistakes, accidents and (consequently) time by providing a clear indication to visiting drivers and suppliers.

As one customer said... 'the area is so much brighter and the staff are clearly happier. They're working cleaner and production has increased...!'

superior

FORMULATIONS

We are pleased to announce that we have our own manufacturing plant. Furthermore, we have the same chemist heading the team who formulated our very first products back in 1991. Make no mistake, we can manufacture to any specification or colour you require.

Having been in the building industry for many years and with a plethora of practical experience, our founding partner Steve Britchford held meetings with some of the UK's leading chemists within the resin industry.

For as long as people can remember, industry has been 'crying out' for products that offer solutions to long standing issues such as damp and contamination, nontoxic and safer for both the employee and environment. Well, Polycote can help you!

The overall strength and longevity of the product remains the ultimate challenge. However, speed of cure to reduce downtime together with ease of use to reduce expensive labour costs are equally as important to the business owner.

Over the last 25 years, we have saved companies £'000's in time, effort and money. Manufacturing floor repairs that can be laid to a feather edge (meaning far less preparation, dust or noise), self-levelling floor screeds that can be poured at a rate of 2000sq.m in one day (and used by vehicular traffic the very next day), through to superior strength floor coatings (we have a coating withstanding 40 forklifts moving well over 10,000 pallets every day of the year!)

...all you have to do now, is to tell us what you need!

professional

APPLICATION

We challenge any company to offer more than Polycote.

By having the same company visit each one of your locations nationwide, using the same products, with exactly the same colours, applied by the same team of applicators and to the same standard of workmanship you will soon find that Polycote offers a huge advantage over almost every other supplier in the UK.

With a full range of specialist preparation equipment, from vacuum assisted shotblasters to diamond grinders, we are ready for every eventuality and can offer the best and most thorough preparation possible.... no matter what the surface or how heavy the traffic!

Health and safety is of paramount importance and we have our some of the most modern and powerful vacuum systems available to ensure that the area is kept clean and any airborne dust kept to a minimum.

Having worked in major airports, the Ministry of Defence, hospitals, HMI Prisons and almost every type of industry, we fully embrace the demanding conditions and inevitable complications of getting the work completed quickly, quietly and cleanly.

By using our products and services, we guarantee you the peace of mind knowing that you have one company in complete control – from the initial call, to the site survey, the manufacture of the agreed products, the preparation of the surface and right through to the final application.

precise

SPECIFICATION

One of the biggest challenges in the installation of a flooring system is to provide a product that will withstand both the amount of wear and tear and the stresses and strains it is likely to be subjected to.

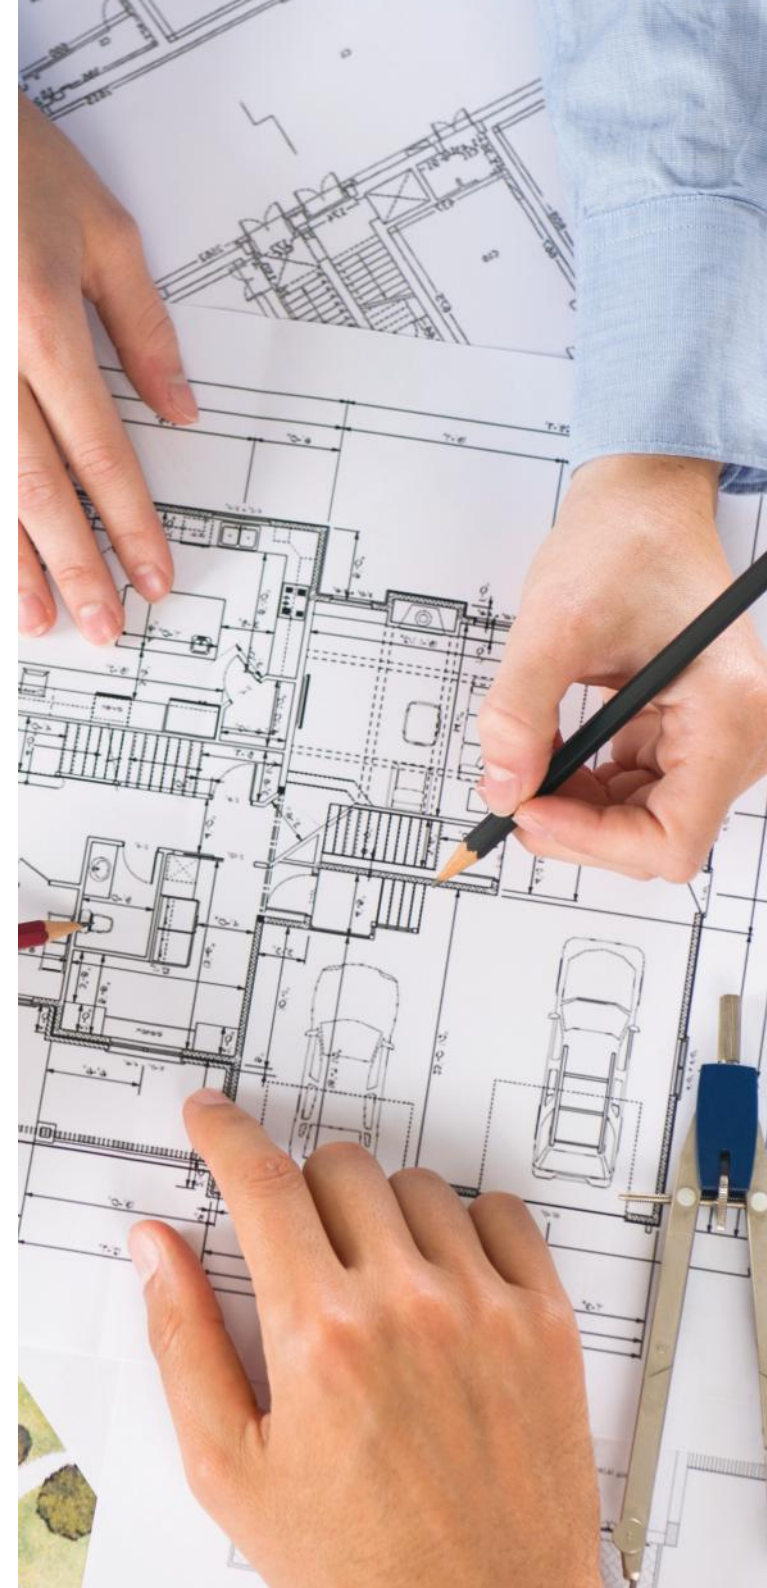

From the intensive trafficking of millions of people at an airport or stadium to the movement of thousands of tonnes of product by forklift, damages caused by chemical attack to the UV resistance needed for external coatings, the correct specification is crucial to the success of the products involved.

It might not only be the strength that is the 'issue'. The smoothness of the surface or the decorative appearance of the floor is often critical in order to ensure the all-important first impression is achieved

We have hundreds of possibilities and our chemists have cleverly blurred the boundaries of beauty, strength and functionality in order to provide you with solutions that will truly meet both your needs AND your aspirations.

Working closely with your architects and/or your own management team, our panel of expert advisers can provide a system truly bespoke to your own personal requirements.

Remember... 'a tiny change today can bring a dramatically different tomorrow.'

approved

INDEX & ACCREDITATIONS

ISO 9001:2008

Probably the most recognised Quality Management Standard across the globe, we achieved this accreditation in just three months. Not only was this a remarkable achievement, but also a testament that the company was well organised, documented and disciplined long before inviting ISO 9001 Accreditation.

UKATA

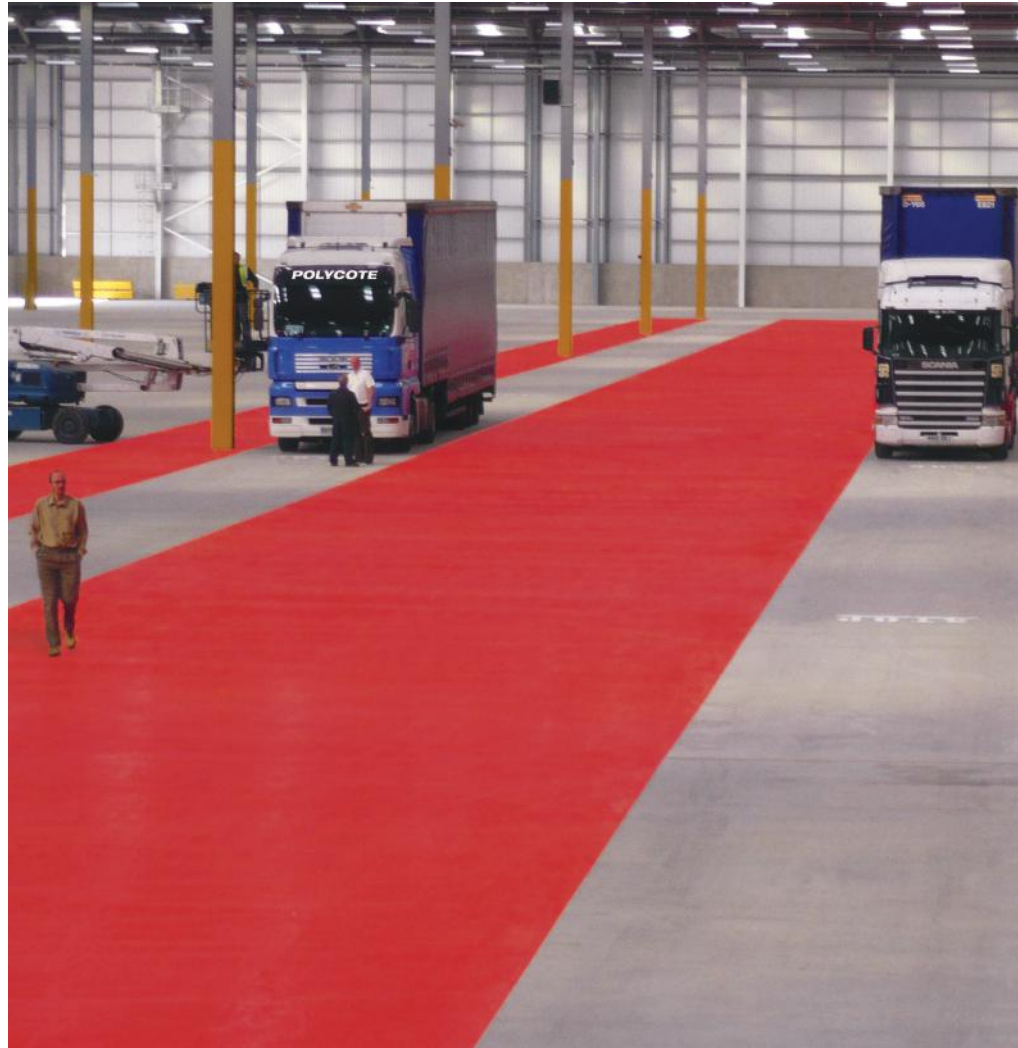

Ignorance isn't an excuse and we are pleased to announce all of our workforce have been trained by UKATA (a leading authority in all levels of asbestos training in the UK) to both know and understand the importance of best practice in the safe handling of asbestos.

Safe Contractor Approval

Sound health and safety policies are vital for the long term success of any business and having undergone a strict examination process, we are pleased to announce that Polycote was awarded the SAFE contractor stamp of approval.

SMAS

With more and more of our clients requesting SMAS accreditation, we underwent a full inspection and assessment of our Health & Safety competence, including policies, procedures, training, records and insurances and we are pleased to announce that we have also gained our SMAS (Safety Management Assessment Specialists) accreditation together withSSIP (Safety Schemes in Procurement) certification.

above & beyond

AEROSPACE

To close a runway or taxiway is often impossible. From a small private airport to a military base, every runway repair job needs to be completed quickly often in just a few hours or even in only a few minutes!

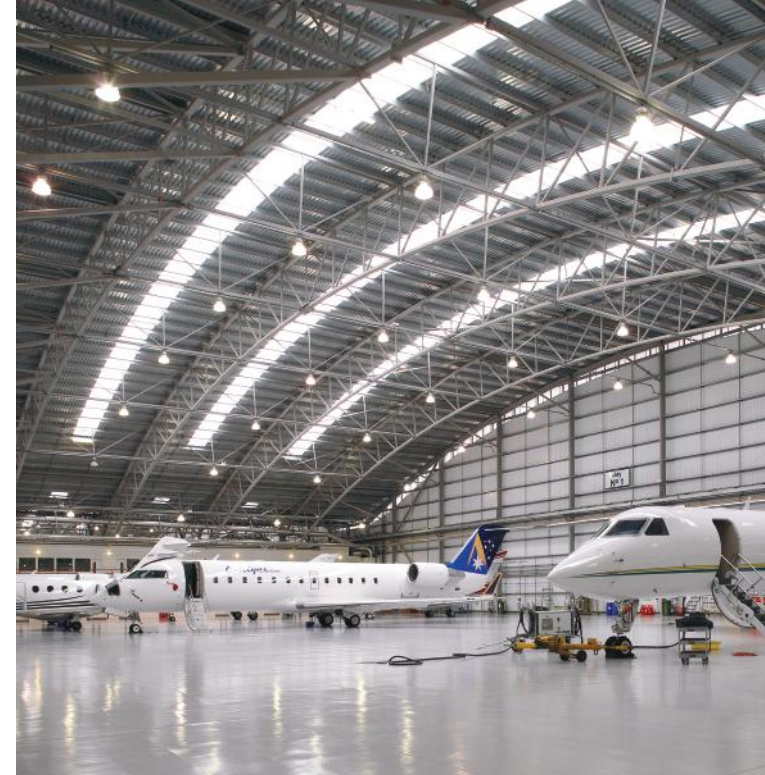

Polycote have developed a range of fast curing products that allow work to be completed during the non-flying periods, thereby preventing disruption to busy airport schedules. Curing in as little as 30 minutes, you can have areas back up and serviceable in record times!

Aviation terminals, maintenance hangars and manufacturing facilities require flooring solutions designed to withstand heavy wear and tear as well as the various aviation fuels and stripping chemicals used within the industry.

Over the last 25 years, Polycote have been heavily involved with many airline companies, including charitable organisations such as the Warwickshire Air ambulance Service (for instance) whereby we coated their helipad with Cemcoat, an incredibly strong, weather resistant cementitious coating.

Gloss finishes are now the favourite of many airline companies. Our long lasting, high strength and high gloss surfaces are not only easy to keep clean but long term maintenance costs are also hugely reduced.

With our products now in constant use throughout the country, in hangars containing heavy jets to microlights, airships to helicopters, architects, specifiers and main contractors are making Polycote their No.1 choice.

defined

AUTOMOTIVE

Garage floors suffer from constant heavy wear and tear. Polycote offer a complete range of specialist resin finishes ideally suited to the sealing and coating of these areas that will offer you a long term proven solution.

If you still think that it is impossible to get a paint to last even more than a few weeks in a garage, then take courage. Having coated thousands of square metres in garages and MOT bays, we can assure you that we have both the products and the expertise to achieve this.

With professional dust free equipment, specialist primers and tough, totally impervious top coats, we are able to stop oil and damp AND withstand the heaviest HGV's, even in areas that are in use 24/7.

Our own building was used as a service centre for MAN Trucks and they were painting the floor every three months. 14 years ago, we shot blasted the floor, applied ONE coat of our oil and damp resistant primer followed by ONE coat of Flortex Professional top coat and we've never had to do it again!!

The Automotive industry is Polycote's single biggest customer and with an unparalleled range of products, together with proven onsite experience we truly offer our customers a single source solution. No matter whether you need a heavy duty chemical resistant coating, a screed for a car park or a waterproof coating for an inspection pit, Polycote can provide you with a long term solution.

meeting your needs

CHEMICAL INDUSTRIES

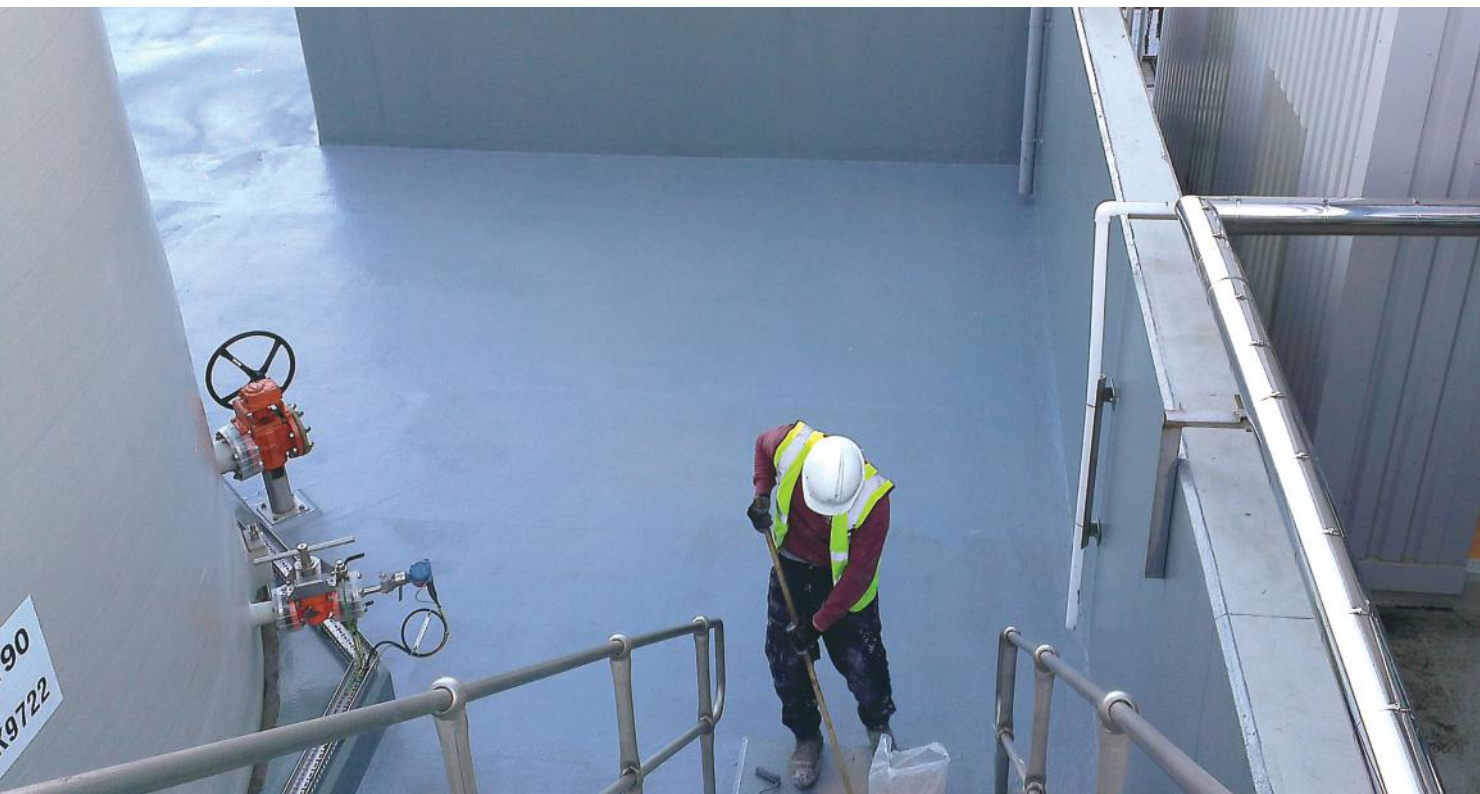

Polycote manufactures chemical resistant coatings bespoke to customer's specific requirements – suitable for both internal and external applications. The most important messages we would like to convey is that we do not simply sell 'chemical resistant products' like everyone else. We manufacture the protection you need.

Having worked with almost every department in the engineering, manufacturing and oil/chemical industry, we are fully conversant with the products needed to ensure that environmental policies are met and the integrity of your company is maintained.

From processes such as electroplating, passivating and galvanising, from the spillage of acids, solvents and other petrochemicals, Polycote are dedicated to providing long term protection from chemical attack.

Unfortunately, bunds are often of insufficient size, and many are not even sufficiently chemical proof! Built only from brick, block or concrete and unable to prevent leakage, they allow serious environmental damage. Our technical consultants are more than happy to give all the free help and advice you need, to ensure your company complies with all the latest regulations.

Our chemists have formulated an array of chemical resistant coatings and screeds, not only capable of withstanding aggressive chemical attack, but also to stand up to the wear and tear of heavily trafficked areas of almost every department within the industry.

tough & enduring

CONSTRUCTION

With tight deadlines to meet and labour costs making up a significant part of any construction budget, it is imperative that products are fast curing and downtime kept to a minimum. Whilst repair and coating activities in a construction environment are an essential activity, they must not disrupt the project plan.

Polycote can act fast and lay up to 2000sq.m of self-smoothing floor screeds in one day. Furthermore our Cretex Easi-screed can be worked on the very next day. We have twin pack floor coatings that will cure in just two hours. We can even supply roof coatings/repairs that can be applied in the pouring rain!

Architect specifications often include extremely expensive coatings and screeds. A quick call to us has saved construction companies £'000's due to us liaising with the architect and matching / improving upon the specification without compromise as well as dramatically improving upon the application times.

Construction sites themselves have many areas of concern. Emergency escape routes should not only be provided, but also clearly marked. Plant room floors should be impervious, resistant to the chemicals used within the area. Chemical areas should be bunded sufficiently to contain any spillage.

Polycote's tough surface coatings not only meet current Health and Safety obligations, but the quality of our far longer lasting coatings will significantly reduce the aggravation and downtime and reducing the need to re-paint. As importantly, from a corporate perspective, our applicators can establish a colour coded uniformity with every one of your sites – nationwide!

dynamic

ENGINEERING

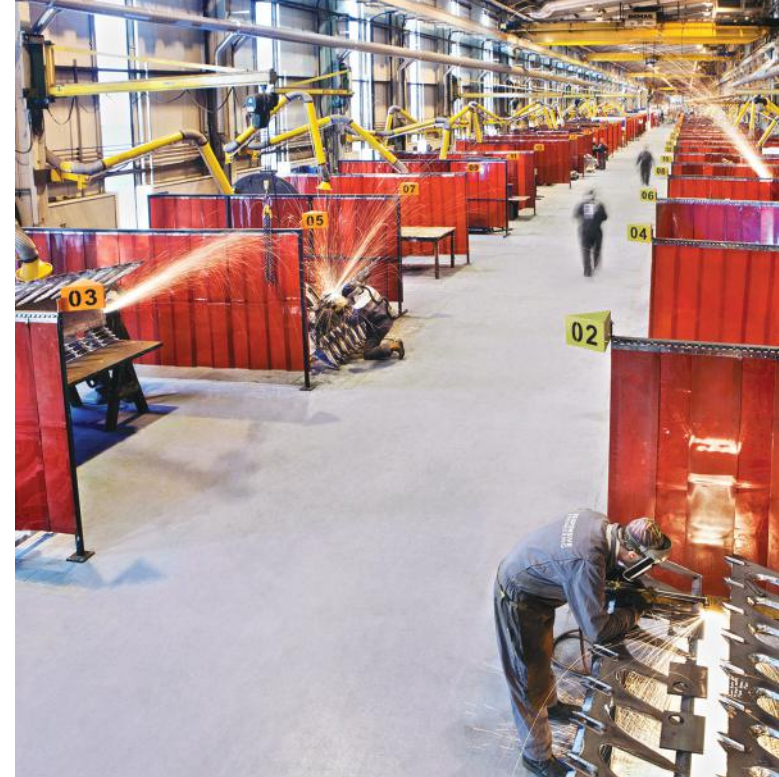

Polycote have laid '000's sq.m of flooring in engineering workshops throughout the UK and we know exactly what is needed to give you a DUST FREE, hard wearing and long lasting solution! Constant forklift traffic causes huge amounts of wear and tear, and the downtime and aggravation caused by the need to re-paint is unacceptable.

Polycote customers are now proving the benefits of colour coding such areas. Loading bays clearly showing visiting drivers where they should go, along with colour coded aisles and production areas means less questions, less hassle and less mistakes for both the employee AND the visitor!!

Polycote's bespoke range of non-toxic and non-taint resin systems can be applied in both wet and dry environments and can be laid from super smooth to 'extremely' slip resistant!

Our technical experts will give quick and easy advice as to the correct preparation and the correct products to use. We establish exactly what your issues are along with the time allowed to complete the work. Only then will we advise on the best preparation, the best primer and the best topcoat or screed to meets your specific needs.

No matter if the surface is poor, rough or covered in oil and grease, we have a solution for you and proven worldwide – since 1991.

unparalleled

FARMING

The farming industry is the backbone of every country and we are pleased to be involved at almost every level within the industry. From the sealing and/or resurfacing of grain store floors, silage pits, dairies, milking parlours, piggeries or chicken sheds, we have products that will withstand constant trafficking and chemical attack.

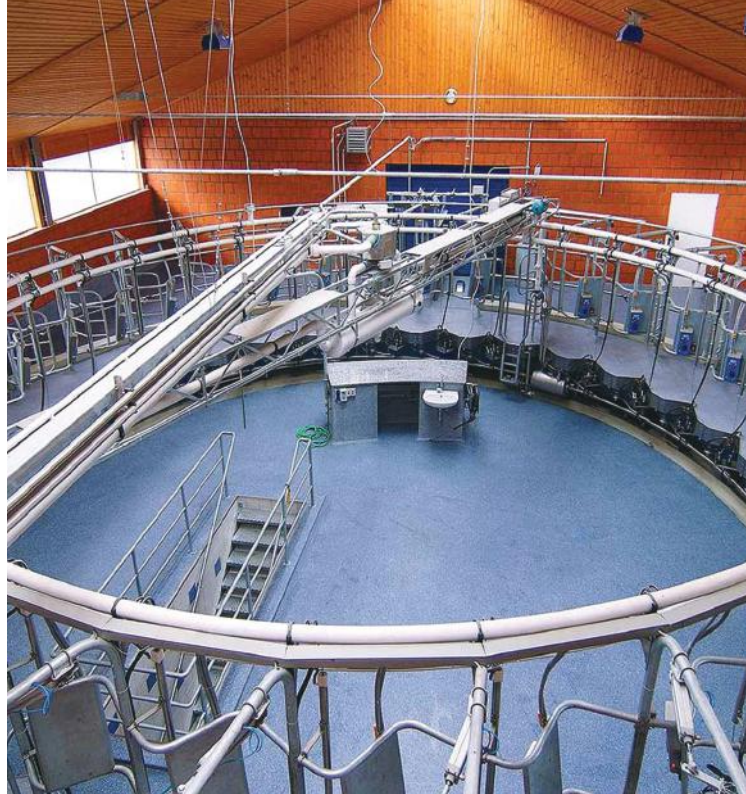

Inferior, lower priced products not only need replacement, but failure in this case can result in a huge loss of time and output. Hence we'd like to highlight that the true COST of inferior products is inevitably far higher than the initial PRICE!!

Incorrect or unsuitable coatings do not sustain the on-going cleaning and maintenance processes and will lift and peel. Furthermore, too much or too heavy an aggregate and the surface can become uncleanable.

Many slip hazards can be easily eliminated just by using the right tools and chemicals in order to clean the floor properly, but this is only possible when you have the right surface and we can truly help you achieve this.

Should you be suffering from leaking asphalt roofs, corroding metal or cracked asbestos sheeting, we have roofing systems that will prevent you the expensive task of having to remove the existing roof structure.

We even have a twin pack spray foam for preventing both heat loss and heat gain. Sprayfoam will also help prevent the on-going grievances caused by the age old problem of condensation, especially in areas such as grain stores, potato sheds and piggeries.

uncompromising

FOOD & DRINK

Polycote has installed flooring systems throughout the food production areas for over 25 years. From bakeries to breweries, slaughtering to processing, we would like to assure you of our ability to supply and install the right flooring solution in any area within the food manufacturing environment.

As well as answering to the demands of food safety standards by way of chemical resistance and cleanliness, our floors have been professionally formulated to withstand punishing daily routines of constant foot fall, heavy machinery movements and on-going, aggressive cleaning routines.

Food production areas suffer from all sorts of issues, chemical attack from substances such as milk, sugar and salt, frequent temperature changes resulting in damp or humid conditions, oil and grease causing slip hazards as well as waste materials and by-product attack from manufacturing processes.

Polycote have an entire range of tough and durable floor coating and screed systems that will give you the chemical resistance and durability you need.

With added hygiene protection, we cover every situation from smooth to slip resistant textures, preventing slips and falls on wet surfaces.

Remember... 'it's better to solve a problem, before it IS a problem.'

smart & fresh

HOSPITALS & CLINICS

Supplying some of the largest health care complexes in the world, Polycote has achieved many technological advancements, including highly advanced biotechnology and nanotechnology.

The prevention of contamination is paramount and we serve as a direct resource to hospital, clinics and medical research centres nationwide, by providing a safe, functional and effective environment for patients, and staff members alike.

Providing long term solutions for floors, walls and roofs, we provide specialist maintenance products to meet the needs of medical buildings and their environs and thereby enabling you to provide the quality of healthcare your customers deserve.

From extremely tough repair and screed products that require very little preparation, to non-toxic or taint, fast curing floor coatings, we are able to provide you with what you need.

Our seamless and totally impervious floor and wall coatings are normally made of epoxy, polyurethane or polyaspartic resins. However, this is dependent upon the processes required and other factors such as chemical and slip resistance, electrical dissipation capability are all taken into careful consideration.

'It's better to solve a problem, before it IS a problem.'

smart & fresh

HOTELS & RESTAURANTS

Every company involved in the care of others prides itself on the protection of its customers by way of a clean, warm and dry environment, all of which being paramount to the success of their business.

Have you considered the colour coding of such areas? It has been proven that a consistent customer experience, enhanced by uniformity of your properties throughout the country, gives more confidence for your customer to return to your venues than for any other reason.

The provision of a floor that is tough, durable, chemical resistant, slip resistant and easy to clean is obviously important. However, sufficient falls, adequate drainage and floor/wall coving all hugely contribute to the easy cleaning and maintenance of hygiene regulations.

Should a refurbishment programme be necessary, Polycote's bespoke range of non-toxic and non-taint resin systems can be applied in both wet and dry environments. No matter if the surface is poor, rough or covered in oil and grease, we have a solution for you.

As well as offering long term solutions for floors and walls, Polycote have a large range of high performance coatings for external walls, roofs and balconies.

Balconies are also a source of on-going issues causing many a varied problem. With many flexible and strong coatings from decorative to clear, Polycote provide excellent long term and aesthetically pleasing solutions.

fresh & contemporary

HOUSE & HOME

With years of unparalleled experience in the supply and installation of resin flooring, including self-smoothing systems and decorative flake and quartz systems, our expertise has become the envy of our competitors.

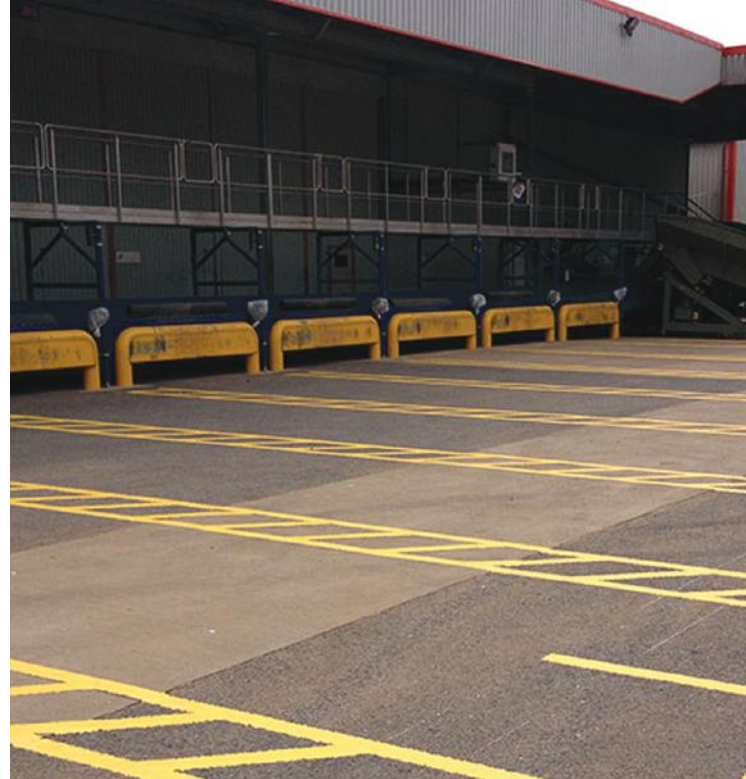

From contemporary gloss flooring to a matt industrial finish, our installers have worked throughout London and the UK for over 25 years, on hundreds of residential and commercial projects.

In living areas, kitchens and bedrooms our flooring systems have been proven as some of the best finishes in the world and can be completely unique and colour coded to your own personal taste. From a single colour to a multi coloured flake or quartz system, each one can be tailored to your exact taste and colour coded to match carpets, wood flooring, curtains or even ornaments. The choice is yours!

Utility areas, bathrooms, showers and wetrooms have long been areas of concern with leaks causing major annoyance and damage. Our flooring systems are totally impervious and much easier to keep clean, bright and fresh. No more mouldy and discoloured grout lines from old fashioned tiling methods.

Garages, where the paint does not peel or come away with car tyres, basements that remain dry, driveways and footpaths with the latest resin bound stone, swimming pool surrounds and tennis court surfacing – all are within the expert capabilities of our professional coatings AND contractors.

distinctive

LOGISTICS

In an industry where same day delivery expectations are becoming normal, companies are moving away from the short life single pack painting of warehouses to the long term advantages of twin pack epoxies.

Being far more durable, far longer lasting, oil and chemical resistant, the strength, longevity and benefits of Polycote are proven without doubt!

The pressure to reduce costs and increase efficiency is relentless. This often results in a drive to minimise delivery times, even to the point of contravention of loading regulations.

Steps, kerbs and loading bay edges should be highlighted for the sake of health and safety in any case. However, the use of colour coding will not only result in greater accuracy for employees, but also prove a far faster turnaround for visiting drivers. Furthermore, slip resistant coatings will also significantly reduce accidents.

Polycote customers are now proving the benefits of colour coding such areas. By clearly showing visiting drivers where they should go, means less questions, less hassle and less mistakes for both the employee AND the visitor!!

precise

MANUFACTURING

Facilities are expensive, take years to commission and their lifetime is in decades. They are obviously one of the most important elements of a business enterprise and this is why facility design and the strategic thinking that should precede its implementation are so important.

Layout and efficiency are two important aspects in the design of production areas. Polycote work with many blue chip companies in providing advice as to the toughest surfaces to install together with bespoke colours that will greatly enhance both appearance and workflow.

It is well known that manufacturing workshops not only take a huge amount of wear and tear but at the same time are one of the most important areas to keep clean and dust free.

Commissioning Polycote to install your floors will bring unparalleled advantages! Using the same products, the same colours and applied by the same teams to the same standard ensures a uniformity throughout every one of your sites nationally, that you've never known before.

We invite you to consider the major benefits of every production room in each one of your factories – having the same colour walkways, the same line marking colours, the same safety colours, same sized hazard boxes, emblems, stencils, etc, etc.

Take advantage of our corporate expertise and we promise that your corporate image will take a HUGE leap forward.

luxury

MARINE

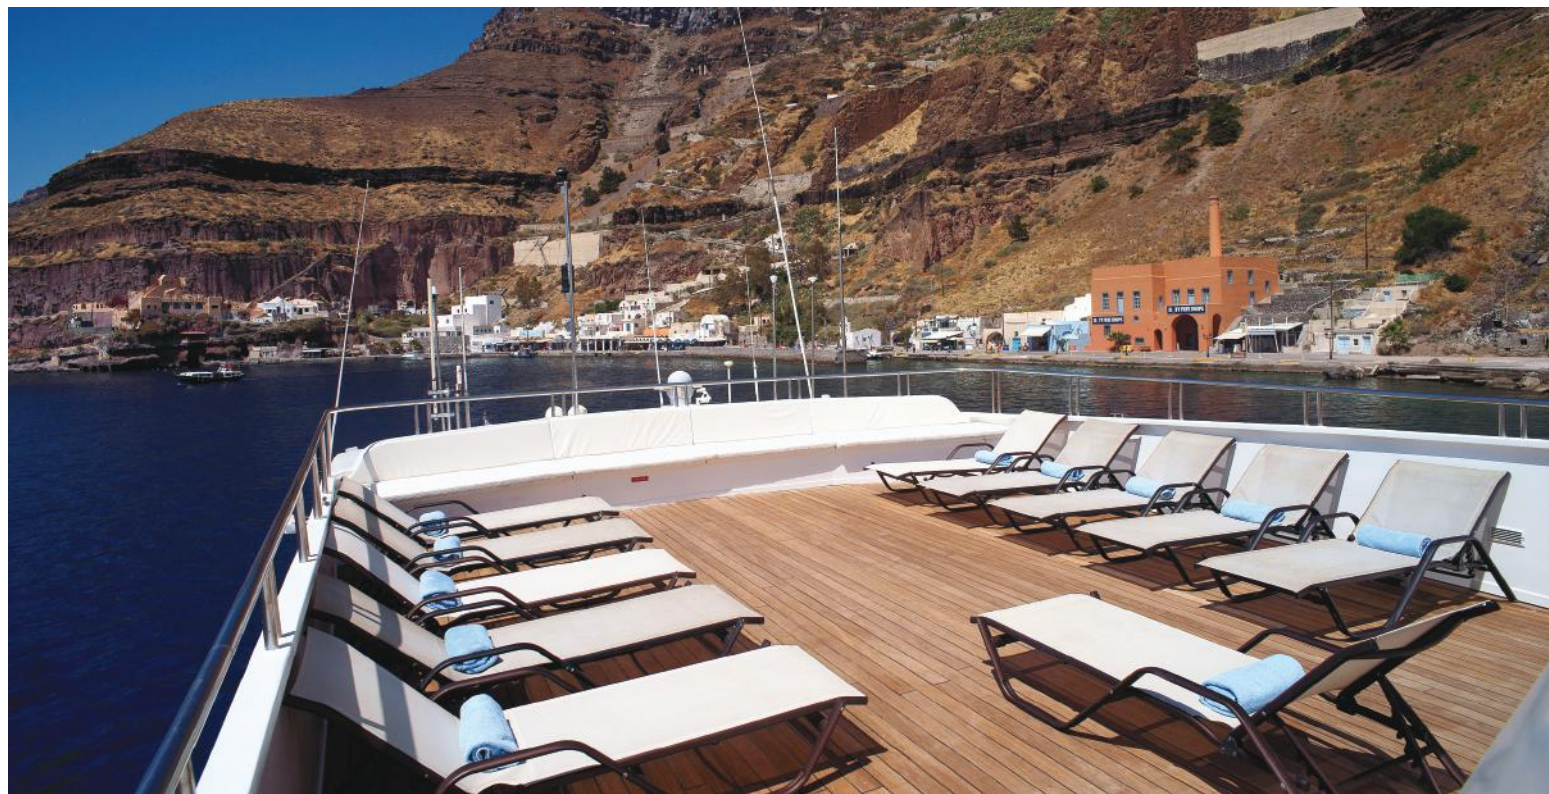

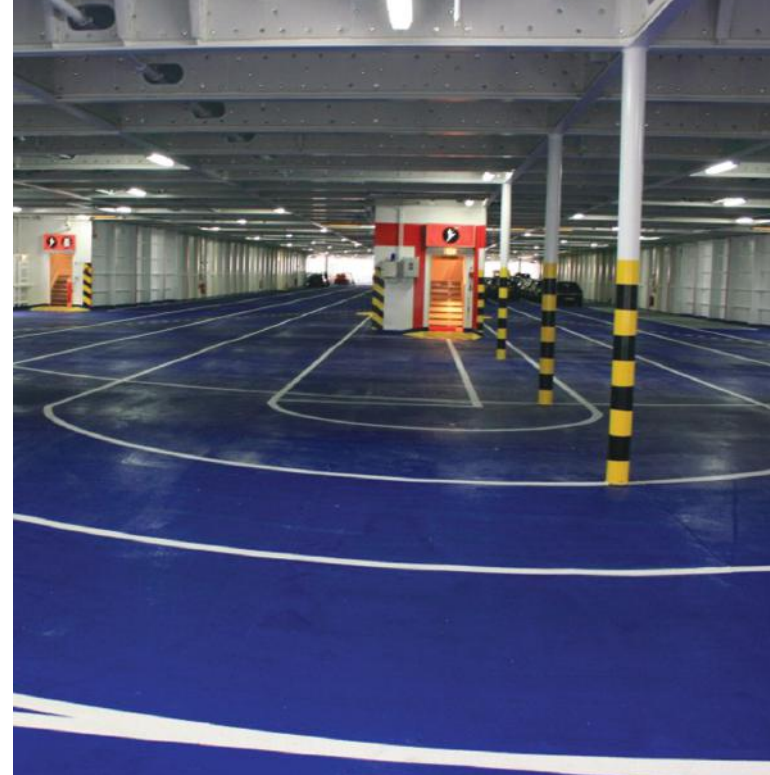

Having worked in the marine industry across the world, from coastal quayside areas to private marinas, the coating of ships decks and hulls, to the waterproofing and protection of barge roofs, Polycote has long been recognised as the provider to the industry of long term solutions.

From clear UV resistant deck coatings to multi-coloured flake and quartz systems, we can supply and apply onto almost any surface and with any colour or colour combinations.

Suitable for both external and internal use, our marine coatings are lightweight, waterproof and resistant to salt attack. They will provide you with the long term protection you need and have been applied onto almost every imaginable type of vessel including cruise ships, yachts, lifeboats, dhows, barges and working boats.

A major benefit of the Polycote systems is that they can be applied whilst in transit and without the need of dry dock conditions, reducing repair and installation disruption to the ships' normal activity and thereby ensuring customer disruption is kept to a minimum.

Slip resistance is obviously an important consideration and as well as the fact that any of our coatings can be made slip resistant, we even have a range of preformed slip resistant treads and ladder rung covers that have been used in every type of vessel including submarines!

efficient

MINING

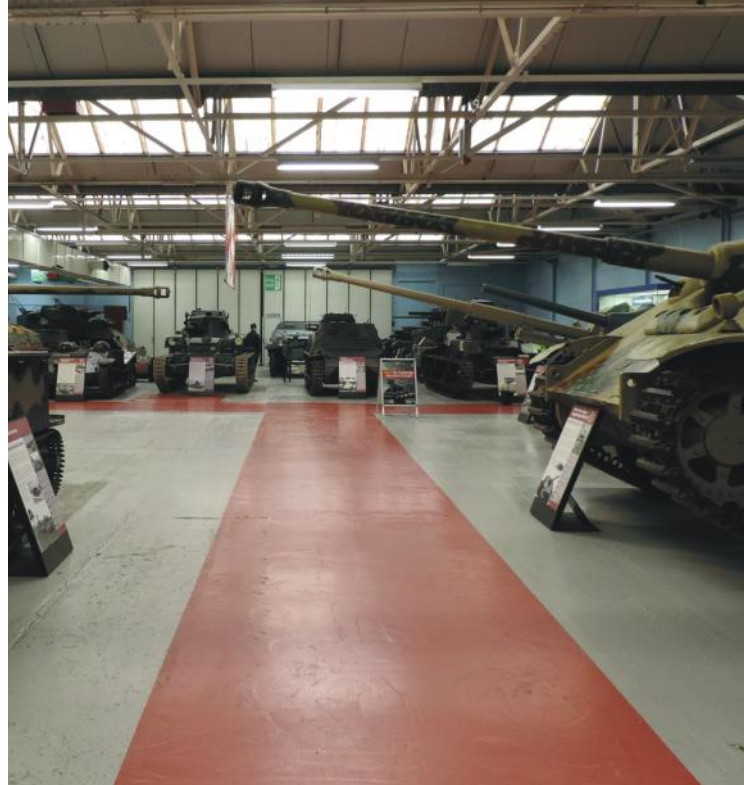

By eliminating inefficiencies caused by poor and slippery surfaces, the increase in productivity can be exponential. Fast curing products and even instant cures such as the use of our pre-formed slip resistant Duragrip Stair Treads and decking results in increased output due to the reduction in equipment / area downtime.

Through the expertise of our technical consultants who have all had years of practical experience within the industry, we make sure that our clients receive the optimum solution for their flooring requirements, no matter whether it is a mine shaft to the steps on a diesel loader. From an industrial mine to a refinery – we have the floors to suit.

At Polycote, we are committed to delivering customer satisfaction and take pride in our finished products. We are focused on delivering the right application for each project and we fully realise the need to keep downtime to a minimum in order for our clients to get production back up to maximum as quickly as possible.

Low toxicity coatings during application and also low smoke emissions in the case of a fire are obviously also extremely important within the confines of a mine and something that Polycote has taken very seriously. Our coatings and screeds have all been formulated with such fundamental requirement first and foremost in our minds.

uncompromising

MINISTRY OF DEFENCE

Withstanding the movements of heavy munitions, artillery and even tanks is a test for any flooring product. However Polycote have a full range of coatings, screeds and repair products that can easily stand up to such heavy wear and tear.

We also understand how imperative for areas to be kept clean and dry and we have both coatings for both floors and walls that will successfully prevent the ingress of water. Furthermore we have roof coatings that can be applied onto any surface, preventing the need for removal of existing material.

From engineering workshops to dry dock naval areas, wetrooms and even helicopter crash testing pools, we have products well proven to provide you with the long term solutions you are looking for.

Many of our customers are now colour coding areas such as Goods In or Despatch. By doing so, they have clearly reduced mistakes, accidents and (consequently) time by providing a clear indication to visiting drivers and suppliers.

Should chemical resistance be an issue we are able to provide a solution that will resist some of the strongest fuel oils including skydrol, solvents and petrochemicals.

clean & hygienic

PHARMACEUTICAL

Laboratories and Clean Rooms are found in the very heart of industry and regardless of specific activities, from the most basic tests to highly advanced biotechnology and even nanotechnology, the prevention of contamination is paramount.

Such is the importance that the special needs of such rooms are not only met but exceeded. We have developed a selection of cutting-edge floor systems, professionally formulated to assist food companies, life science and advance technology facilities in maintaining their rooms to the highest environmental standards.

Polycote's bespoke range of non-toxic and non-taint resin systems can be applied in both wet and dry environments and can be laid from super smooth to 'extremely' slip resistant!

Our seamless and totally impervious floor and wall coatings are extremely important factors when deciding upon the right floor, as are chemical resistance, slip resistance and electrical dissipation capabilities.

Expansion joints, so often overlooked, are extremely important to seal against the ingress of bacteria and Polycote takes great care in ensuring that these are not only maintained but filled to a suitable standard with a highly advance jointing compound.

Slip resistant coatings significantly reduce accidents and help prevent injury to personnel and/or damage to goods. Properly sealed floors hugely reduce the amount of dust, cleaning time and on-going maintenance.

tough & secure

HM PRISONS & CUSTODIAL

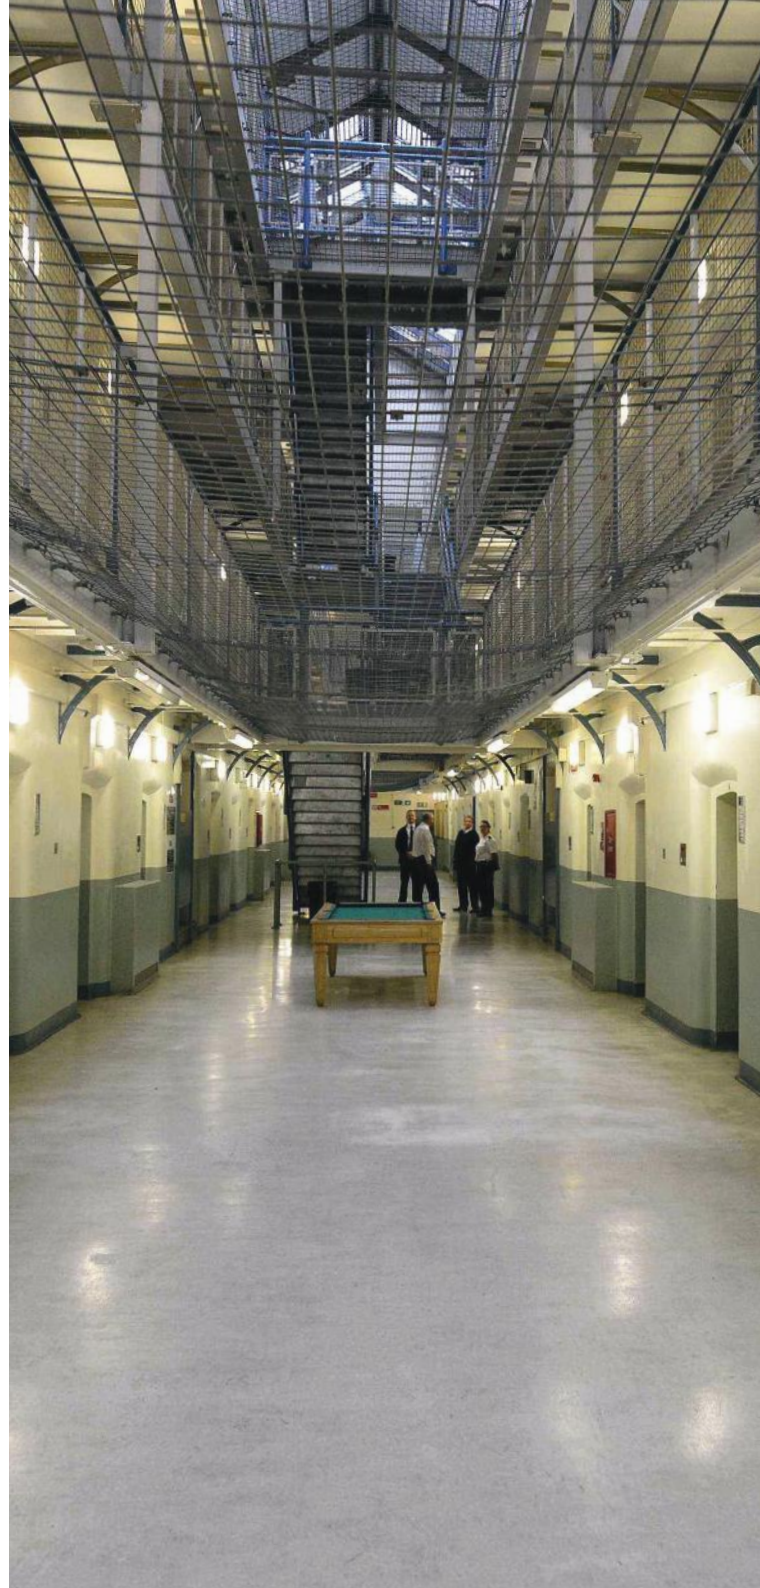

With an unrivalled range of epoxy and polyurethane coatings and screeds, Polycote are one of the country's leading suppliers and installers of specialist flooring into prisons, detention centres and other custodial areas.

Fast curing formulas have been specifically developed to allow installations to be completed quickly and easily, ensuring that any disruption to the working areas are kept to an absolute minimum.

Health and Safety is obviously of paramount importance as is the need for ease of cleaning and the reduction of bacteria and infection. With a complete range of tough, seamless and totally impervious coatings, our products are well proven in kitchens, laundry and utility areas, plant rooms, wet rooms and swimming pools.

Long proven in cell blocks and detention areas, our tough resin floors will provide you with excellent impact and abrasion resistance. Tough resin coving, far more resistant to impact damage than the standard, pvc / metal coving, is often used in such areas. Furthermore, your daily cleaning routines will be dramatically reduced due to areas being so much easier to keep clean.

With the benefits of our own manufacturing facility, we can supply you with whatever you need, from smooth to slip resistant, antistatic and chemical resistant. Our flexible coatings have incredible impact resistance and with excellent adhesion strength the removal (pick off) of the coatings is kept to an all-time low.

sophisticated

RETAIL & COMMERCIAL

Both our Retail and Commercial customers within the Motor Trade are increasingly changing to the latest resin flooring solutions as architects and designers are favouring surfaces that are impervious and seamless.

Being highly chemical resistant, the coating is resistant to battery acids to road salts as well as oil spills and grease! Even the difficulties of removing tyre marks is also hugely reduced!

If you are looking for an ultra-modern showroom, our highly decorative systems Decratex Flake and Decratex Quartz have an endless amount of colour co-ordinated options and effects (even glitter can be added for that extra sparkle) and these coatings will transform not only the floor itself but indeed the entire environment.

Company logos, designs and messages can also be cleverly incorporated within your new floor.

We offer some of the latest technologically advanced coatings. Furthermore, our nationwide network of qualified and experienced contractors 'TEAM POLYCOTE' will be quick to respond, technically aware, proactive and flexible.

distinctive

SCHOOLS & COLLEGES

Our extensive product portfolio is packed with high performance products well-suited to meet the demands of educational environments. It is now well known that the right setting, providing an air of calm and tranquillity whilst being modern and fresh has an exponential effect on the education and training of both children and adults.

The colour coding of areas is an excellent way of helping pupils recognise and identify specific areas, particularly dangers and schools specialising in 'special needs' and for the disabled are now finding the huge benefits that the colour coding of flooring brings to the school.

Should you be part of a group of schools, particularly within the private school arena, company image becomes extremely important and the colour coding of floors will play a massive part in setting your schools apart from the competition.

We offer an entire range of truly bespoke products. With almost an unlimited range of colours, including multi-coloured flakes and aggregates, almost every imaginable textures and patterns can be achieved.

At Polycote, we are constantly striving to improve both our products and our service. We now have an entire range of fast curing and non-toxic coatings that not only reduce the time taken but also mean that complete floors can be upgraded during term time (in just one weekend) leaving the holidays free for the larger and more awkward work to be completed.

heavy duty & traffic resistant SEA & RAIL

Having applied thousands of square metres of floor coatings, repairs and screeds in rail sheds, platforms and stations, as well as on piers, sea defences, ships and oil platforms, Polycote is well equipped with both the product and expertise to provide you with long term solutions.

We are fully conversant with the challenges and requirements of such areas, from the need of fast curing products to ensure minimum disruption to train and docking operations to the importance of making every effort to minimise noise and public disturbance.

With a full range of emergency repair products, we have products that can cure in freezing conditions, even down to -40°C, twin pack resin coatings that can be driven on in as little as 30 minutes, through to roof repair products that can be applied in the pouring rain – even underwater!

For the larger contracts, our technical team will fully integrate with your civil departments, architects, etc to arrive at the best solution for long term and larger contracts. Having just completed a full refurbishment of over 11,000sq.m of platforms and pits at a rail maintenance depot, we can prove we are more than able to provide what you need, no matter what the size and no matter where it may be in the world!

prestigious

SPORTS & STADIA

Working closely with many sports centres, Polycote is able to offer a complete range of coatings and protection to almost any surface, marked out to the very highest levels of accuracy and finish, using some of the latest resin and acrylic technology available.

From the initial installation to the refurbishment of existing surfaces we cover a wide range of outdoor sport spaces including both asphalt and concrete pitches together with internal areas from football pitches to squash courts.

Line marking for all types of areas, both internally and externally, including the marking of grassed areas is readily available both by way of material only for self application through to fully applied systems using our own fitters – **'TEAM POLYCOTE'**.

Since 1991, our surfaces are in daily use in facilities throughout the country including schools, football and rugby clubs, tennis clubs, local parks, skate parks, hotel chains and areas forming part of larger regeneration projects.

Remember... "Success is simple. Do what's right, the right way, at the right time".

uncompromising

WHOLESALEERS

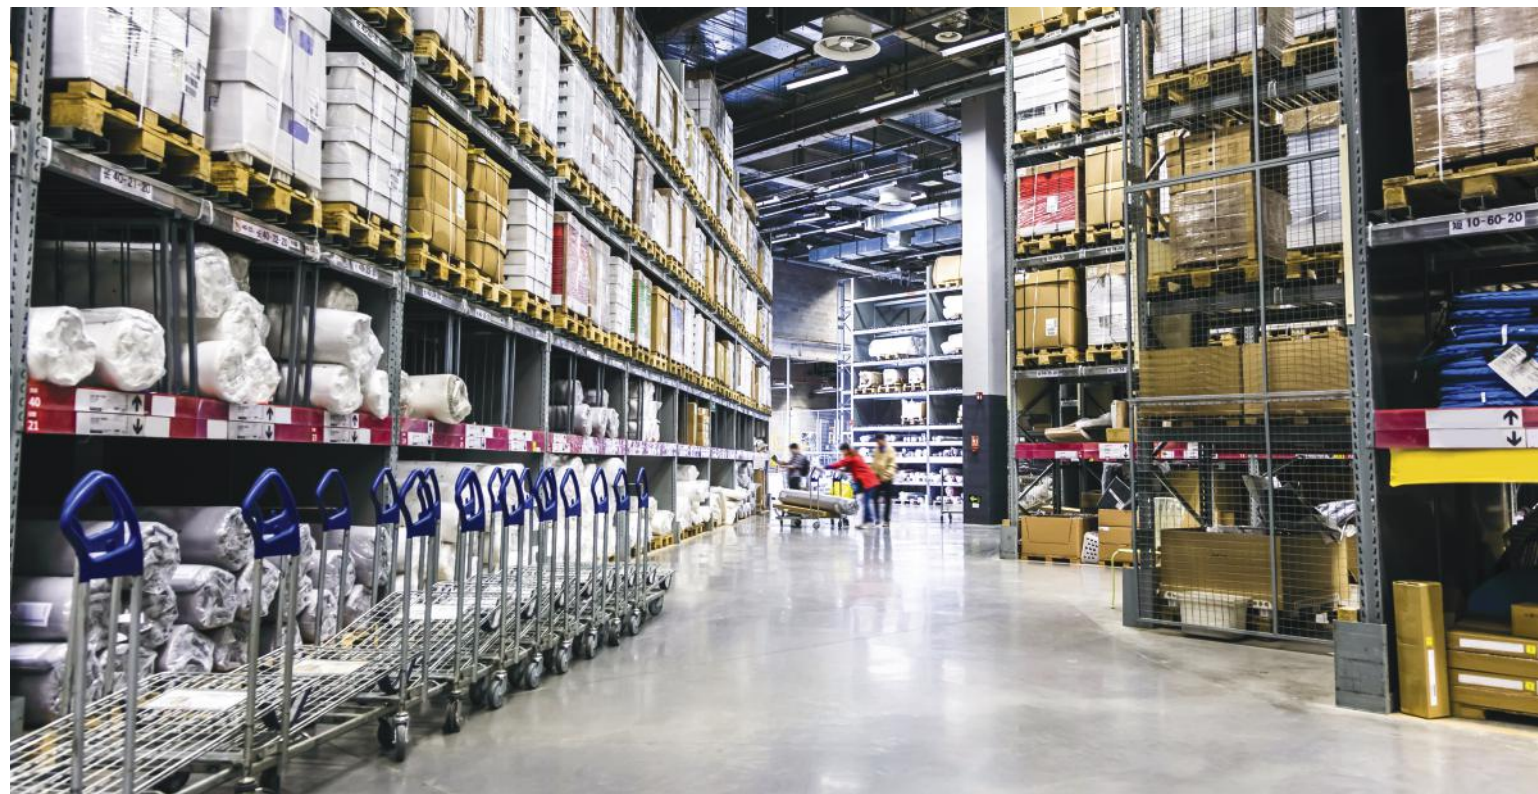

Facilities are expensive, they take years to commission and their lifetime is in decades. They are obviously one of the most important elements of a business enterprise and this is why facility design and the strategic thinking that should precede its implementation are so important.

Layout and efficiency are two important aspects in the design of production rooms. Polycote work with many blue chip companies in providing advice as to the toughest surfaces to install together with bespoke colours that will greatly enhance both appearance and workflow.

Commissioning Polycote to install your floors will bring unparalleled advantages! Using the same products, the same colours and applied by the same teams to the same standard ensures a uniformity throughout every one of your sites nationally, that you've never known before.

We invite you to consider the major benefits of every production room in every factory having the same colour walkways, the same line marking colours, the same safety colours, same sized hazard boxes, emblems, stencils, etc, etc. Your corporate image will take a HUGE leap forward.

"Desire is the key to motivation, but its determination and commitment to excellence, that will enable you to attain the success you seek".

creative

ZOOS & PARKS

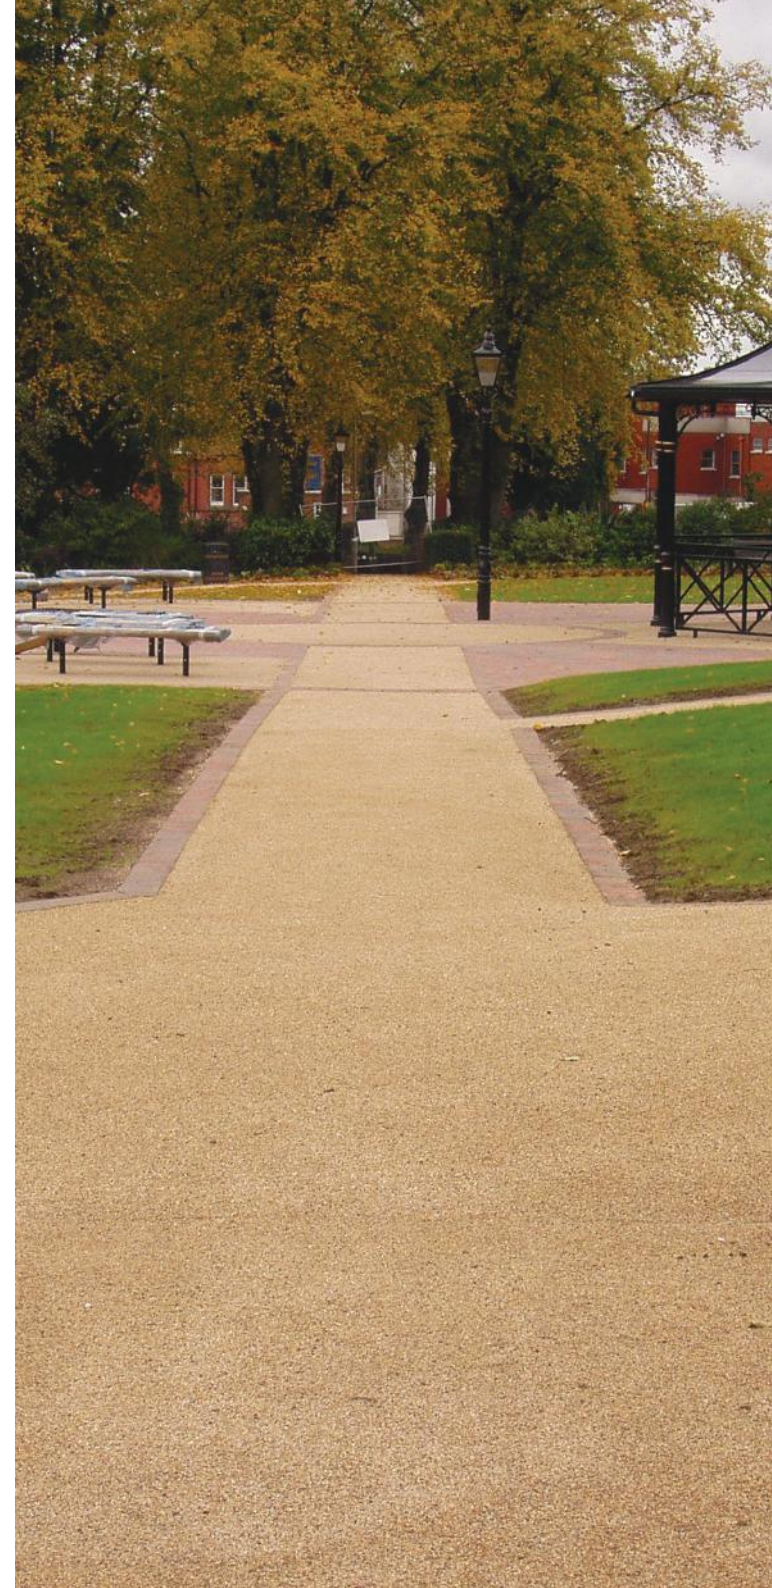

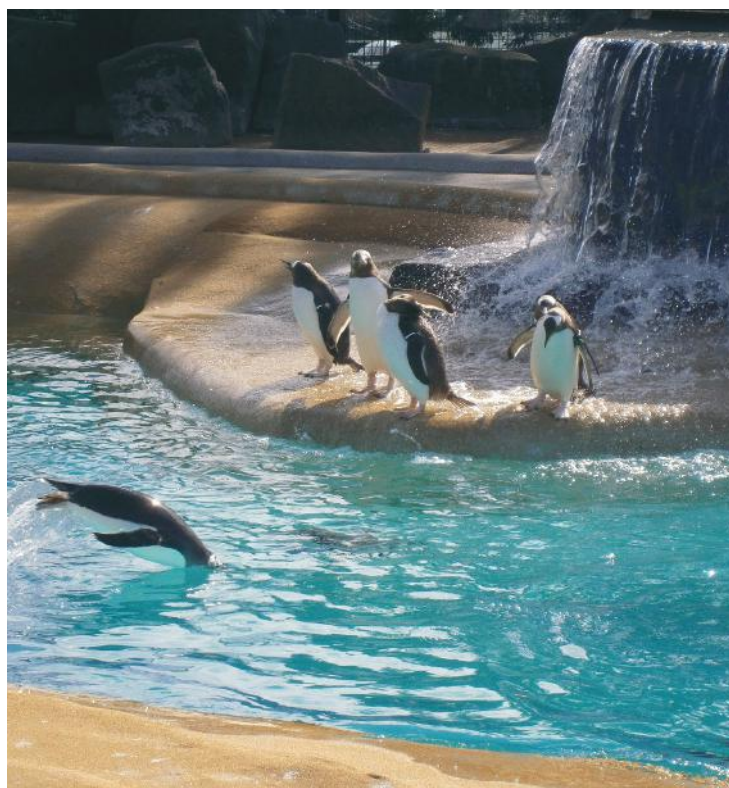

Since 1991, Polycote have supplied and installed, a diverse range of products into Zoos, Aquatic Centres, Veterinary Practices, Theme Parks & Local Councils.

From the insulation of rhino, elephant and giraffe houses, to the sealing of pools for penguins and tigers, self-smoothing floor screeds (over under-floor heating) in lion houses and strip curtains to retain the warmth in Giraffe Houses, you can rest assured that we have an answer to your needs.

For kitchens and restaurants, viewing areas, offices and toilets, staging, steps and stair-cases, we have coatings that are extremely hardwearing, even under constant foot traffic, and due to being totally impervious, remain easy to keep clean.

Our Pebbletex system is extremely popular on roads and paths. Applied with resin, the stones are held in position ensuring children cannot throw it, animals cannot dig and weeds cannot grow through! The area blends in perfectly with the environment and achieves a maintenance free natural stone appearance!

Every visitor to a zoo experiences frustration of not knowing where they are or what 'route' they are on. Colour coding is an incredibly easy way to improve your customer experience. Our technical department will help establish a scheme that is totally bespoke to your own particular surroundings or requirements.

unmistakably

WORLDWIDE

Established in Bedford in 1991, Polycote has consistently grown and our products are now in constant use in almost every continent, from Argentina to Abu Dhabi, Germany to Ghana, Iceland to India and Jersey to Jamaica, to name but a few!!

With a team of fully qualified and experienced advisors who are quick to respond, technically aware, proactive and flexible, I am pleased to confirm that Polycote can truly provide a professional solution for your needs.

We have tropical grade resins manufactured to cope with both high temperatures and high humidity conditions. Our resin bound stone Pebbletex has even added beauty (we claim!) to the exquisite Caribbean island of Mustique!

Whether it is your floor that needs preparing, levelling and/or coating, rising damp issues or roof coatings resistant to the Caribbean sun, (our roof coatings are well proven from Jamaica to St. Vincent), we can truly provide the best specification tailored to your individual needs – worldwide.

May I thank you for your interest in our products and services and hope this brochure has shown you our proven ability to provide you with a world class service and my final question for you is; are you concerned about cost OR price?

Remember... "the bitterness of poor quality remains long after the sweetness of low price is forgotten!"
